Donation Management APPLICATION

System Requirements Specification

1 PROJECT ABSTRACT

Donation Management Application is Spring boot RESTful application with MySQL, where NGOs can raise the funds by inviting the donors online and sending the notification about the events and donations.

Following is the requirement specifications:

	Donation Management System Application
Modules	
1	NGO
2	Donor
3	Donation
4	Donation Request
NGO Module Functionalities	
1	Register a NGO
2	Update the existing NGO details
3	Get the NGO by Id
4	Fetch all registered NGOs
5	Delete an existing NGO
Donor Module Functionalities	
1	Register a Donor
2	Update the existing Donor
3	Get a Donor by Id
4	Fetch all registered Donors
5	Delete an existing Donor
6	Fetch all the Donors registered with a NGO
Donation Module Functionalities	
1	Create a Donation
2	Update the existing Donation details
3	Get the Donation by Id
4	Fetch all Donations
5	Delete an existing Donation
6	Fetch all Donations done by a Donor
7	Fetch all Donations done for a NGO

Donation Request Module Functionalities	
1	Create a Donation Request
2	Get the Donation Notification by the NGO
3	Get all the Donation request sent to a Donor

2 ASSUMPTIONS, DEPENDENCIES, RISKS / CONSTRAINTS

2.1 NGO CONSTRAINTS:

- While deleting an NGO, if ngold does not exist then the operation should throw a custom exception.
- While fetching the NGO details by id, if ngold does not exist then the operation should throw a custom exception.

2.2 DONOR CONSTRAINTS

- While deleting the Donor, if donorld does not exist then the operation should throw a custom exception.
- While fetching the Donor details by id, if donorld does not exist then the operation should throw a custom exception.
- While fetching all the Donor details by NGO id, if ngold does not exist then the operation should throw a custom exception.

2.3 DONATIONS CONSTRAINTS

- While deleting the Donation, if donationId does not exist then the operation should throw a custom exception.
- While fetching the Donation details by id, if donationId does not exist then the operation should throw a custom exception.
- While fetching all the Donations done by a donor id, if donorld does not exist then the operation should throw a custom exception.
- While fetching all the Donation details by NGO id, if ngold does not exist then operation should throw custom exception.

2.4 DONATION REQUEST CONSTRAINTS

- While fetching the all the Donation request done by NGO, if ngold does not exist then operation should throw custom exception.
- While fetching all the Donation requests sent to a donor, if donorld does not exist then the operation should throw a custom exception.

Common Constraints

- For all rest endpoints receiving @RequestBody, validation check must be done and must throw custom exception if data is invalid
- All the business validations must be implemented in dto classes only.
- All the database operations must be implemented on entity object only
- Do not change, add, remove any existing methods in service layer
- In Repository interfaces, custom methods can be added as per requirements.
- All RestEndpoint methods and Exception Handlers must return data wrapped in **ResponseEntity**

3 BUSINESS VALIDATIONS

- NGO name is not null, min 3 and max 100 characters.
- NGO username is not null, min 3 and max 50 characters.
- NGO password is not null, min 3 and max 50 characters.
- NGO address is not null, min 3 and max 100 characters.
- NGO phone number is not null and have min 10 and max 10 digits
- NGO started In is not null, have 'yyyy-mm-dd' format and should be past date
- NGO documents is not null, min 3 and max 100 characters.
- Donor name is not null, min 3 and max 100 characters.
- Donor username is not null, min 3 and max 50 characters.
- Donor password is not null, min 3 and max 50 characters.
- Donor email is not null, min 3 and max 100 characters and should be in email format
- Donor phone number is not null and have min 10 and max 10 digits
- Donor address is not null, min 3 and max 100 characters.
- Donation type is not null, min 3 and max 100 characters.
- Donation amount is not null
- Donation date is not null, have 'yyyy-mm-dd' format and should be future date
- Donation Request amount is not null
- Donation Request status is not null, min 3 and max 100 characters
- Donation request end date is not null, have 'yyyy-mm-dd' format and should be future date

4 REST ENDPOINTS

Rest End-points to be exposed in the controller along with method details for the same to be created

4.1 NgoCONTROLLER

URL Exposed	Purpose						
<div>1. /ngos/register-ngo</div> <table><tr><td>Http Method</td><td>POST</td></tr><tr><td>Parameter 1</td><td>NgoDto</td></tr><tr><td>Return</td><td>NgoDto</td></tr></table>	Http Method	POST	Parameter 1	NgoDto	Return	NgoDto	Register a NGO
Http Method	POST						
Parameter 1	NgoDto						
Return	NgoDto						
<div>2. /ngos/update-ngo</div> <table><tr><td>Http Method</td><td>PUT</td></tr><tr><td>Parameter 1</td><td>NgoDto</td></tr><tr><td>Return</td><td>NgoDto</td></tr></table>	Http Method	PUT	Parameter 1	NgoDto	Return	NgoDto	Update the NGO
Http Method	PUT						
Parameter 1	NgoDto						
Return	NgoDto						
<div>3. /ngos/get/{ngold}</div> <table><tr><td>Http Method</td><td>GET</td></tr><tr><td>Parameter 1</td><td>Long(ngold)</td></tr><tr><td>Return</td><td>NgoDto</td></tr></table>	Http Method	GET	Parameter 1	Long(ngold)	Return	NgoDto	Fetches the details of NGO by Id
Http Method	GET						
Parameter 1	Long(ngold)						
Return	NgoDto						
<div>4. /ngos/delete/{ngold}</div> <table><tr><td>Http Method</td><td>DELETE</td></tr><tr><td>Parameter 1</td><td>Long (ngold)</td></tr><tr><td>Return</td><td>Boolean</td></tr></table>	Http Method	DELETE	Parameter 1	Long (ngold)	Return	Boolean	Delete the Ngo detail
Http Method	DELETE						
Parameter 1	Long (ngold)						
Return	Boolean						
<div>5. /ngos/all</div> <table><tr><td>Http Method</td><td>GET</td></tr><tr><td>Parameter 1</td><td>-</td></tr><tr><td>Return</td><td>List<NgoDto></td></tr></table>	Http Method	GET	Parameter 1	-	Return	List<NgoDto>	Fetch all registered NGOs
Http Method	GET						
Parameter 1	-						
Return	List<NgoDto>						
<div>6. /ngos/create-donation-request</div> <table><tr><td>Http Method</td><td>POST</td></tr><tr><td>Parameter 1</td><td>DonationRequestDto</td></tr><tr><td>Return</td><td>DonationRequestDto</td></tr></table>	Http Method	POST	Parameter 1	DonationRequestDto	Return	DonationRequestDto	Create a Donation request
Http Method	POST						
Parameter 1	DonationRequestDto						
Return	DonationRequestDto						
<div>7. /ngos/donation-request-by-ngo/{ngold}</div> <table><tr><td>Http Method</td><td>GET</td></tr><tr><td>Parameter 1</td><td>Long(ngold)</td></tr><tr><td>Return</td><td>List<DonationRequestDto></td></tr></table>	Http Method	GET	Parameter 1	Long(ngold)	Return	List<DonationRequestDto>	Get all the donation request by the NGO
Http Method	GET						
Parameter 1	Long(ngold)						
Return	List<DonationRequestDto>						
<div>8. /ngos/ donation-request-by-donar/{donarId}</div> <table><tr><td>Http Method</td><td>GET</td></tr><tr><td>Parameter 1</td><td>Long(donarId)</td></tr><tr><td>Return</td><td>List<DonationRequestDto></td></tr></table>	Http Method	GET	Parameter 1	Long(donarId)	Return	List<DonationRequestDto>	Get all the donation requests for a donar
Http Method	GET						
Parameter 1	Long(donarId)						
Return	List<DonationRequestDto>						

--	--

4.2 DONARCONTROLLER

URL Exposed	Purpose						
1. /donars/register-donar <table> <tr> <td>Http Method</td><td>POST</td></tr> <tr> <td>Parameter 1</td><td>DonarDto</td></tr> <tr> <td>Return</td><td>DonarDto</td></tr> </table>	Http Method	POST	Parameter 1	DonarDto	Return	DonarDto	Register a Donar
Http Method	POST						
Parameter 1	DonarDto						
Return	DonarDto						
2. /donars/update-donar <table> <tr> <td>Http Method</td><td>PUT</td></tr> <tr> <td>Parameter 1</td><td>DonarDto</td></tr> <tr> <td>Return</td><td>DonarDto</td></tr> </table>	Http Method	PUT	Parameter 1	DonarDto	Return	DonarDto	Update the existing donar
Http Method	PUT						
Parameter 1	DonarDto						
Return	DonarDto						
3. /donars/get/{donarId} <table> <tr> <td>Http Method</td><td>GET</td></tr> <tr> <td>Parameter 1</td><td>Long(donarId)</td></tr> <tr> <td>Return</td><td>DonarDto</td></tr> </table>	Http Method	GET	Parameter 1	Long(donarId)	Return	DonarDto	Fetches the donar details by id
Http Method	GET						
Parameter 1	Long(donarId)						
Return	DonarDto						
4. /donars/all <table> <tr> <td>Http Method</td><td>GET</td></tr> <tr> <td>Parameter 1</td><td>-</td></tr> <tr> <td>Return</td><td>List<DonarDto></td></tr> </table>	Http Method	GET	Parameter 1	-	Return	List<DonarDto>	Fetch the details of all the registered donars
Http Method	GET						
Parameter 1	-						
Return	List<DonarDto>						
5. /donars/delete/{donarId} <table> <tr> <td>Http Method</td><td>DELETE</td></tr> <tr> <td>Parameter 1</td><td>Long (donarId)</td></tr> <tr> <td>Return</td><td>Boolean</td></tr> </table>	Http Method	DELETE	Parameter 1	Long (donarId)	Return	Boolean	Delete the existing Donar
Http Method	DELETE						
Parameter 1	Long (donarId)						
Return	Boolean						
6. /donars/get-by-ngo/{ngold} <table> <tr> <td>Http Method</td><td>GET</td></tr> <tr> <td>Parameter 1</td><td>Long (ngold)</td></tr> <tr> <td>Return</td><td>List<DonarDto></td></tr> </table>	Http Method	GET	Parameter 1	Long (ngold)	Return	List<DonarDto>	Fetch all the donars registered with the NGO
Http Method	GET						
Parameter 1	Long (ngold)						
Return	List<DonarDto>						
7. /donations/add-donation <table> <tr> <td>Http Method</td><td>POST</td></tr> <tr> <td>Parameter 1</td><td>DonationDto</td></tr> <tr> <td>Return</td><td>DonationDto</td></tr> </table>	Http Method	POST	Parameter 1	DonationDto	Return	DonationDto	Create a Donation
Http Method	POST						
Parameter 1	DonationDto						
Return	DonationDto						
8. /donations/update-donation <table> <tr> <td>Http Method</td><td>PUT</td></tr> <tr> <td>Parameter 1</td><td>DonationDto</td></tr> <tr> <td>Return</td><td>DonationDto</td></tr> </table>	Http Method	PUT	Parameter 1	DonationDto	Return	DonationDto	Update the existing Donation details
Http Method	PUT						
Parameter 1	DonationDto						
Return	DonationDto						

9. /donations/delete/{donationId}		Delete an existing Donation
Http Method	DELETE	
Parameter 1	Long (donationId)	
Return	Boolean	
10. /donations/get/{donationId}		Get the donation details by id
Http Method	GET	
Parameter 1	Long (donationId)	
Return	DonationDto	
11. /donations/all		Fetch all the existing donations
Http Method	GET	
Parameter 1	-	
Return	List<DonationDto>	
12. /donations/get-by-donar/{donarId}		Fetch all the donations for a particular donar
Http Method	GET	
Parameter 1	Long(donarId)	
Return	List<DonationDto>	
13. /donations/get-by-ngo/{ngold}		Fetch all the donations raised by a particular NGO
Http Method	GET	
Parameter 1	Long(ngold)	
Return	List<DonationDto>	
14.		

5 TEMPLATE CODE STRUCTURE

5.1 PACKAGE: COM.IIHT.TRAINING.NGO

Resources

DonationManagementSystemApplication (Class)	This is the Spring Boot starter class of the application.	Already Implemented
--	---	---------------------

5.2 PACKAGE: COM.IIHT.TRAINING.NGO.ENTITY

Resources

Class/Interface	Description	Status
NgoEntity (class)	o Annotate this class with proper annotation to	Partially implemented.

	<p>declare it as an entity class with ngold as primary key.</p> <ul style="list-style-type: none"> o Map this class with the ngo_details table. o Generate the ngold using IDENTITY strategy 	
DonarEntity(class)	<ul style="list-style-type: none"> o This class is partially implemented. o Annotate this class with proper annotation to declare it as an entity class with donarId as primary key. o Map this class with donar table. o Generate the donarId using the IDENTITY strategy 	Partially implemented.
Donation(class)	<ul style="list-style-type: none"> o This class is partially implemented. o Annotate this class with proper annotation to declare it as an entity class with donationId as primary key. o Map this class with donation table. o Generate the donationId using the IDENTITY strategy 	Partially implemented.
DonationRequestEntity (class)	<ul style="list-style-type: none"> o This class is partially implemented. o Annotate this class with proper annotation to declare it as an entity class with requestId as primary key. o Map this class with donation_request table. o Generate the requestId using the IDENTITY strategy o 	Partially implemented

5.3 PACKAGE: COM.IIHT.TRAINING.NGO.DTO

Resources

Class/Interface	Description	Status
NgoDto (class)	Use appropriate annotations from the Java Bean Validation API for validating attributes of this class. (Refer Business Validation section for validation rules).	Partially implemented.
DonarDto (class)	Use appropriate annotations from the Java Bean Validation API for validating attributes of this class. (Refer Business Validation section for validation rules).	Partially implemented.
DonationDto (class)	Use appropriate annotations from the Java Bean Validation API for validating attributes of this class. (Refer Business Validation section for validation rules).	Partially implemented.
DonationRequestDto (class)	Use appropriate annotations from the Java Bean Validation API for validating attributes of this class. (Refer Business Validation section for validation rules).	Partially implemented

5.4 PACKAGE: COM.IIHT.TRAINING.NGO.MODEL.EXCEPTION

Resources

Class/Interface	Description	Status
ExceptionResponse (class)	Object of this class is supposed to be returned in case of exception through exception handlers	Already implemented.

5.5 PACKAGE: COM.IIHT.TRAINING.NGO.REPOSITORY

Resources

Class/Interface	Description	Status
NgoRepository (interface)	<ol style="list-style-type: none">1. Repository interface exposing CRUD functionality for NGO Entity.2. You can go ahead and add any custom methods as per requirements	Partially implemented
DonarRepository (interface)	<ol style="list-style-type: none">1. Repository interface exposing CRUD functionality for DonarEntity Entity.2. You can go ahead and add any custom methods as per requirements	Partially implemented
DonationRepository (interface)	<ol style="list-style-type: none">1. Repository interface exposing CRUD functionality for Donation Entity.2. You can go ahead and add any custom methods as per requirements	Partially implemented
DonationRequestRepository (interface)	<ol style="list-style-type: none">1. Repository interface exposing CRUD functionality for DonationRequest Entity.	Partially implemented

	2. You can go ahead and add any custom methods as per requirements	
--	--	--

5.6 PACKAGE: COM.IIHT.TRAINING.NGO.SERVICE

Resources

Class/Interface	Description	Status
NgoService (interface)	Interface to expose method signatures for NGO related functionality. Do not modify, add or delete any method	Already implemented.
DonarService (interface)	Interface to expose method signatures for Donar related functionality. Do not modify, add or delete any method	Already implemented.
DonationService (interface)	Interface to expose method signatures for Donations related functionality. Do not modify, add or delete any method	Already implemented.
DonationRequestService (interface)	Interface to expose method signatures for Donation request related functionality. Do not modify, add or delete any method	Already implemented

5.7 PACKAGE: COM.IIHT.TRAINING.NGO.SERVICE.IMPL

Resources

Class/Interface	Description	Status
NgoServiceImpl (class)	<ul style="list-style-type: none">Implements NgoService. Contains template method implementation.Need to provide implementation for NGO related functionalitiesAdd required repository dependencyDo not modify, add or delete any method signature	To be implemented.
DonarServiceImpl (class)	<ul style="list-style-type: none">Implements DonarService. Contains template method implementation.Need to provide implementation for Donar related functionalitiesAdd required repository dependencyDo not modify, add or delete any method signature	To be implemented.
DonationServiceImpl (class)	<ul style="list-style-type: none">Implements DonationService. Contains template method implementation.Need to provide implementation for donations related functionalitiesAdd required repository dependencyDo not modify, add or delete any method signature	To be implemented.

DonationRequestServiceImpl (class)	<ul style="list-style-type: none"> Implements DonationRequestService. Contains template method implementation. Need to provide implementation for donation request and notifications related functionalities Add required repository dependency Do not modify, add or delete any method signature 	To be implemented
---	--	-------------------

5.8 PACKAGE: COM.IIHT.TRAINING.NGO.EXCEPTION

Resources

Class/Interface	Description	Status
GlobalHandler (class)	<ul style="list-style-type: none"> RestControllerAdvice Class for defining global exception handlers. Contains Exception Handler for InvalidDataException class. Use this as a reference for creating exception handler for other custom exception classes 	Partially implemented.

Class/Interface	Description	Status
NgoNotFoundException (Class)	<ul style="list-style-type: none"> • Custom Exception to be thrown when trying to fetch or delete the NGO info which does not exist. • Need to create Exception Handler for same wherever needed (local or global) 	Already created.
DonarNotFoundException (Class)	<ul style="list-style-type: none"> • Custom Exception to be thrown when trying to fetch or delete Donar info which does not exist. • Need to create Exception Handler for same wherever needed (local or global) 	Already created.
DonationNotFoundException (Class)	<ul style="list-style-type: none"> • Custom Exception to be thrown when trying to fetch or delete a donation info which does not exist. • Need to create Exception Handler for same wherever needed (local or global) 	Already created.

5.9 PACKAGE: COM.IIHT.TRAINING.NGO.CONTROLLER

Resources

Class/Interface	Description	Status
NgoController (Class)	<ul style="list-style-type: none">• Controller class to expose all rest-endpoints for NGO and donation request related activities.• May also contain local exception handler methods	To be implemented
DonarController (Class)	<ul style="list-style-type: none">• Controller class to expose all rest-endpoints for Donar and Donations related activities.• May also contain local exception handler methods	To be implemented

6 CONSIDERATIONS

- A. There is no roles in this application
- B. You can perform the following 3 possible actions

NGO
Donor
Donation
Donation Request

7 EXECUTION STEPS TO FOLLOW

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal.
3. To build your project use command:
mvn clean package -Dmaven.test.skip
4. To launch your application, move into the target folder (**cd target**). Run the following command to run the application:
java -jar donation-management-system-0.0.1-SNAPSHOT.jar
5. This editor Auto Saves the code.
6. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use **CTRL+Shift+B**-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
7. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
8. To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.
9. This is a web-based application, to run the application on a browser, use the internal browser in the workspace. Click on the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.

Note: The application will not run in the local browser

10. Default credentials for MySQL:
 - a. Username: **root**
 - b. Password: **pass@word1**
11. To login to mysql instance: Open new terminal and use following command:
 - a. **sudo systemctl enable mysql**
 - b. **sudo systemctl start mysql**

NOTE: After typing the second sql command (sudo systemctl start mysql), you may encounter a warning message like :

System has not been booted with systemd as init system (PID 1).

Can't operate. Failed to connect to bus: Host is down

>> Please note that this warning is expected and can be disregarded.

Proceed to the next step.

c. `mysql -u root -p`

The last command will ask for password which is 'pass@word1'

12. Mandatory: Before final submission run the following command:

`mvn test`

13. You need to use **CTRL+Shift+B** - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
